

# **NEWCLAY SATIN**

## **INSTRUCTIONS FOR USE**

### **Shake the bottle well before use.**

Newclay Satin is specially formulated for use with Newclay, Claydium and NovaClay air-drying modelling clays. Newclay Satin provides the final transparent satin finish to your finished, dry Newclay, Claydium or NovaClay article.

Newclay Satin should be applied to the dry clay surface by brush in thin, even coats. Each coat should be allowed to dry before applying a further coat. Four or five coats should be sufficient.

Newclay Satin can be applied over, or mixed with, any water-bound or powder colour, and will also act as an adhesive for dry Newclay, Claydium or NovaClay pieces.

Unused Newclay Satin should be stored in the original bottle with the lid closed tightly, or in another airtight container.
